1. Installation

To install TORANJ theme you need a WordPress website up and running either on your local machine or your online host.

- 1- Extract the zipped package downloaded from ThemeForest to your desktop, in the extracted package you will find *toranj-theme.zip* file.
- 2- You can install the theme in two ways, via **admin panel** or via **FTP**.

It is recommended to **upgrade** your WordPress to the latest stable version to make use of the latest features.

1.1. Install theme using admin panel

- 1- Login to admin panel.
- 2- Go to *Appearance > Themes* and click on the tab Install Themes. Choose upload.
- 3- Click on **Browse**, select the downloaded theme file and click in **Install Now**.
- 4- After successful installation click on **Activate** or go to *Appearance > Themes* and click on Activate to activate the newly installed theme.

1.2. Install theme using FTP

Extract *toranj-theme.zip* file and upload the extracted folder to */wp-content/themes/* folder on your server. Then you will find new item

at your WordPress admin panel under *Appearance* > *Themes* menu.
Click install and activate it.

2. Theme Plugins

TORANJ theme makes use of some WordPress plugins, make sure to **install them** before you begin to build your website. Just after you activate the theme you will be notified about the recommended plugins for this theme and you can follow and install/activate them.

2.1. Visual Composer plugin

This is a premium plugin that we have bought and included in the theme. You don't need to buy it or activate the license for it. It helps you to build your pages and organize your content fast and easy with drag and drop functionality.

[Visual Composer plugin by WPBakery](#) provided with you package is highly customized and adapted to the TORANJ theme and you can just use it with TORANJ WordPress theme.

2.2. Gallery Plugin

This plugin is a dedicated plugin written and developed by owwwlab. We have made it available outside of the theme files as a separated plugin so that you can have your data available even if you want to use another theme.

2.3. Bulk gallery plugin

The bulk gallery plugin is an alternative for gallery plugin in case you have many images and need a simple gallery. Each post in this plugin is a gallery and you can add you images using a drag and drop interface and create a gallery.

2.4. Portfolio Plugin

This plugin is also for you portfolio and it is a separated plugin from the theme files. Install and use it to add portfolio to your website.

2.5. KenBurned Slideshow

You can add several KenBurned slideshows anywhere to your website, using this plugin.

2.6. Master Slider WordPress

This is also a premium plugin added to the package and can be used to build sliders and galleries to show your photos and videos.

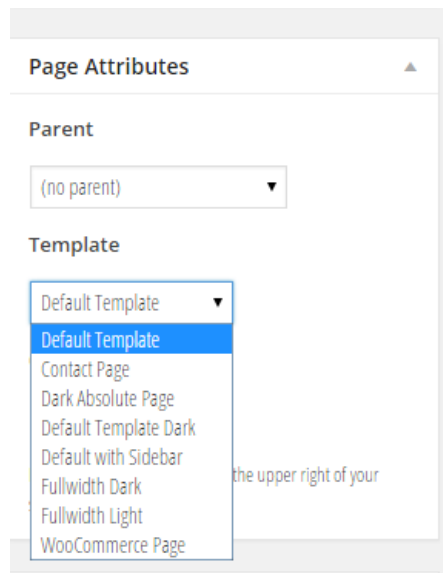

2.7. Contact Form 7

Contact Form 7 plugin is a popular free plugin for WordPress and we use it to build the contact form for the website, it is supported by Visual Composer plugin as an item in the list of short-codes.

It is included in your package and you can use it but one may grab it from WordPress plugins website and use it, there won't be a problem. Please go ahead and update it whenever the author published new version.

3. Templates for pages

There are 10 types of templates provided by TORANJ that you can make use of to build your pages.

3.1. Default Templates

Default template is the main Template you can use for your simple pages. It will show the title of the page and the content that you add to it, and the content is wrapped within the container here is a screenshot for a page using Default template:

TORANJ / Professional SERVICES

Professional SERVICES

Etiam luctus turpis sed magna pellentesque lobortis vestibulum. Fusce ut mi at sem dignissim aliquet nunc leo tellus. Etiam luctus turpis

This is a simple paragraph tag. The Love Boat soon will be making another run. The Love Boat promises something for everyone. Makin their way the only way they know how. That's just a little bit more than the law will allow. It's time to put on makeup. It's time to dress up right. It's time to raise the curtain on the Muppet Show tonight. Movin' on up to the east side. We finally got a piece of the pie. So lets make the most of this beautiful day. Since we're together And you know where you were then. Girls were girls and men were men. Mister we could use a man like Herbert Hoover again.

SHOOTING

Collaboratively administrate empowered markets via plug-and-play networks. Dynamically procrastinate B2C users after installed base benefits. Dramatically visualize customer directed convergence without revolutionary ROI

Skills

This is a simple paragraph tag. The Love Boat soon will be making another run

Available Variations:

- Default Template
- Default Template Dark
- Default With Sidebar

Default template Dark is similar to default template except the background of the page is dark.

Default With Sidebar has a built-in sidebar of widgets that you can configure what should be displayed in it at the widgets section of the admin panel. Just go to *appearance > widgets* and add your widgets to this sidebar named **Main Widget Area**.

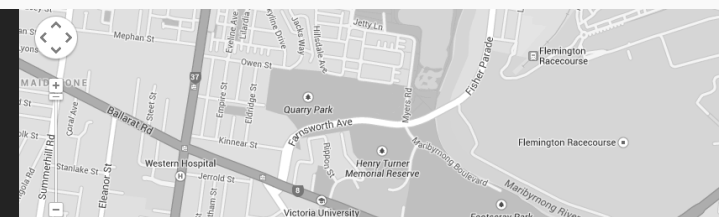

Note: We recommend you to use visual composer to define the layout and structure of your page and different page templates are built for you to use them as the basement of the pages. It means that almost all of the Page Templates of this theme are really poor and they just provide the basic dark and light or full-width or contained layouts for you.

3.2. Contact Page

There is a special page named contact. It uses some theme options as the content. You don't need to add any content to this type of page. Just input the title of the page and set the template to be

Please rate/review this product:
<http://themeforest.net/downloads>

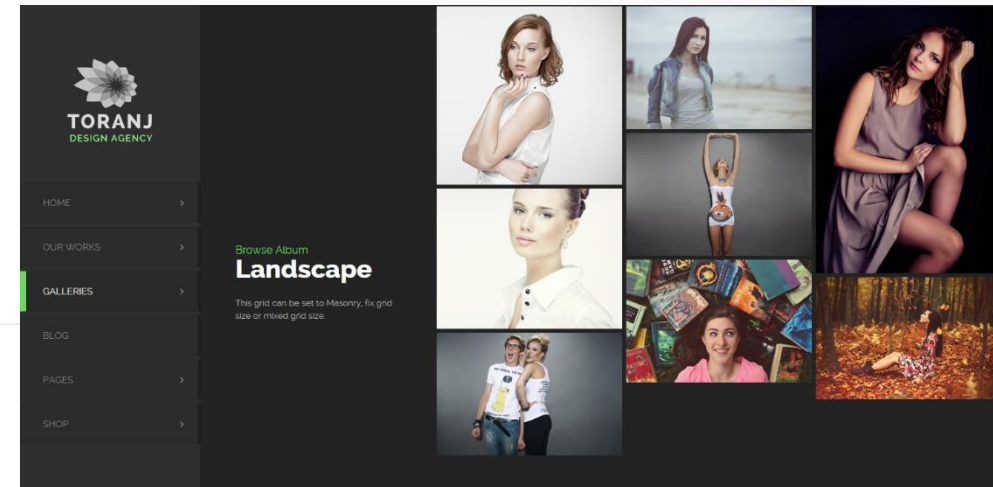

Contact

contact page, then you have to add some details and fields via *appearance > theme options > contacts* and your page is ready.

3.3. Full-Width Pages

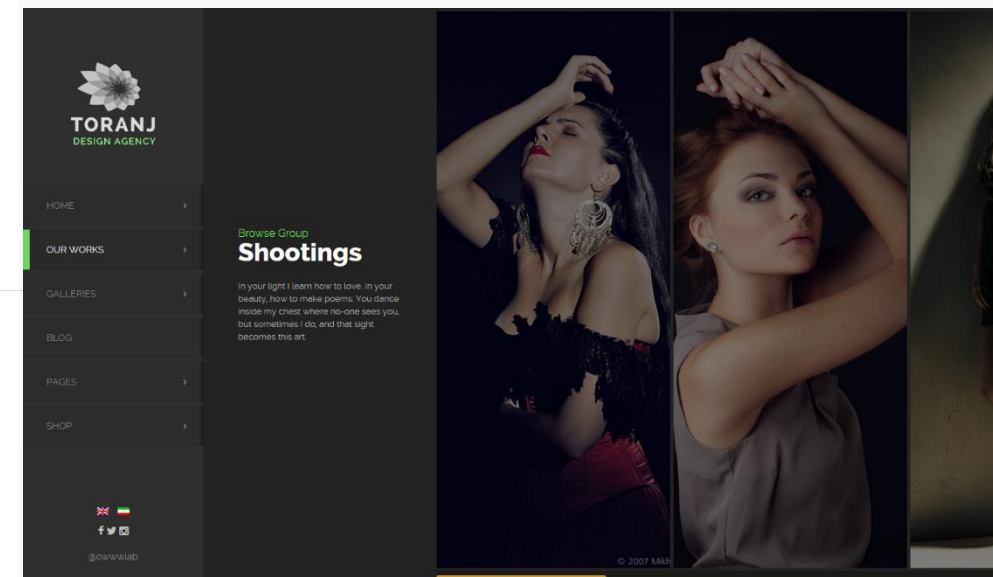

In some situations and pages you want to get rid of the wrapper that contains your content and want to make all the space available for your page. In those cases you can use these types of Page Templates. An example could be the grid gallery page, In this type of page you use a gallery short-code from Visual Composer to generate the gallery for you, but you want to make use of all the available width of the page, also you want it to be dark, so you should use the *Fullwidth Dark Page*.

3.4. Absolute Pages

Certain features of the theme need absolute positioning (don't worry if you don't know what it means), you should use this type of page template for those features at Visual Composer.

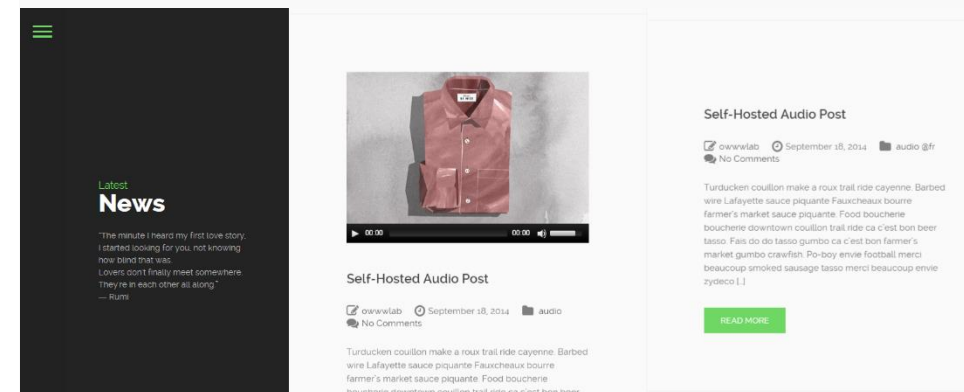

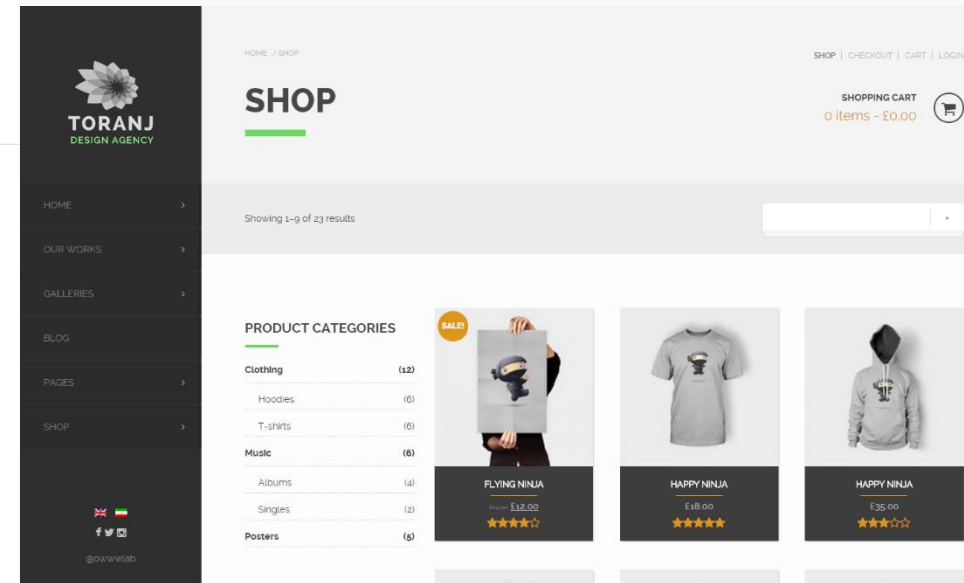

- Horizontal scrolling gallery
- Full screen galleries of Master Slider (vertical and horizontal)
- Full screen ken burn slideshow
- Full screen Double carousel

As an explanation, these types of content need to be full screen, and as you might know users browse your website with various devices and sizes, to maintain the full screen capability with various heights of various devices we have made this page template available for these types of theme features.

3.5. WooCommerce Pages

In case you wish use the popular WooCommerce Plugin o add a shop to your website, you might know that this plugin adds some pages to you pages list like cart page, my account page etc. We have designed a special page template for them to show some great features of this plugin at those pages like a custom menu and card holder at the header section of the page. You should use this page only for WooCommerce pages.

4. Blog

TORANJ theme empowers you with different blog designs that you can customize and use to publish your content.

Please rate/review this product:
<http://themeforest.net/downloads>

4.1. Variations of blog index pages:

- Grid layout
- Regular layout
- Regular with sidebar layout
- Minimal layout

Note: All these variations can be configured at theme options

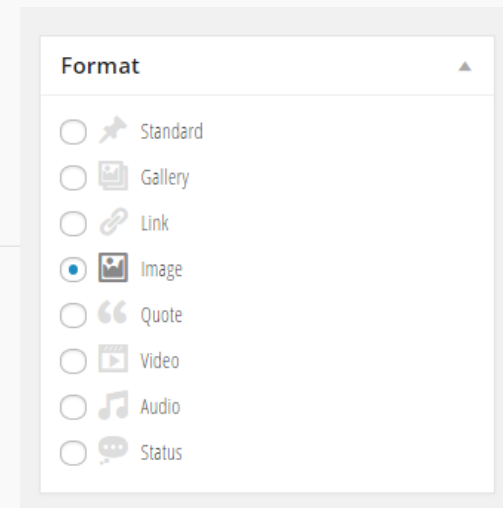

4.2. Variations of single post layouts:

- Full width cover with parallax scrolling title
- Regular page with sidebar

Note: All these variations can be configured at theme options.

4.3. Variations of post formats that you can publish:

1. Standards post with featured image
2. Gallery post
3. Quote post
4. Twitter status post
5. Vimeo video post
6. Youtube video post
7. Self-hosted audio post
8. SoundCloud audio post

5. Gallery Plugin

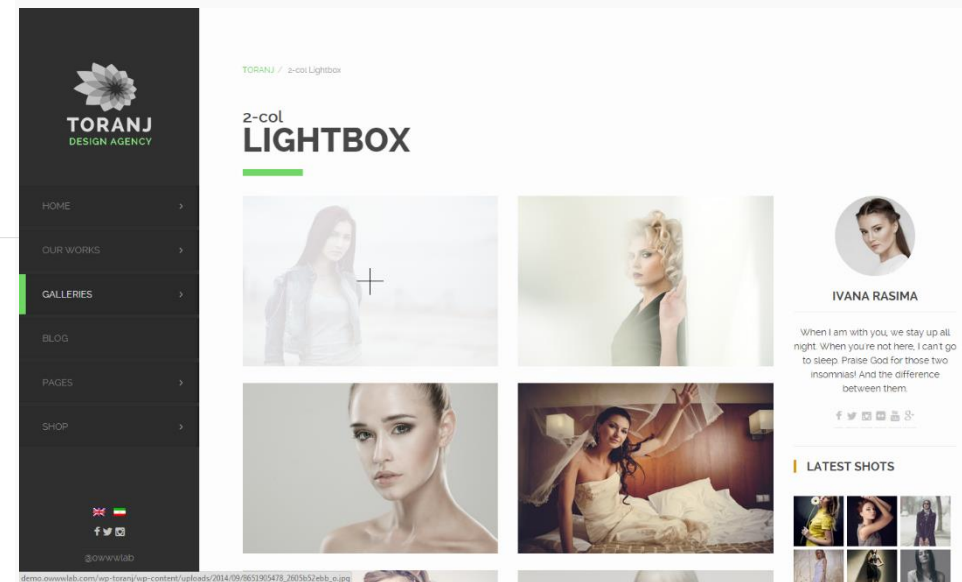

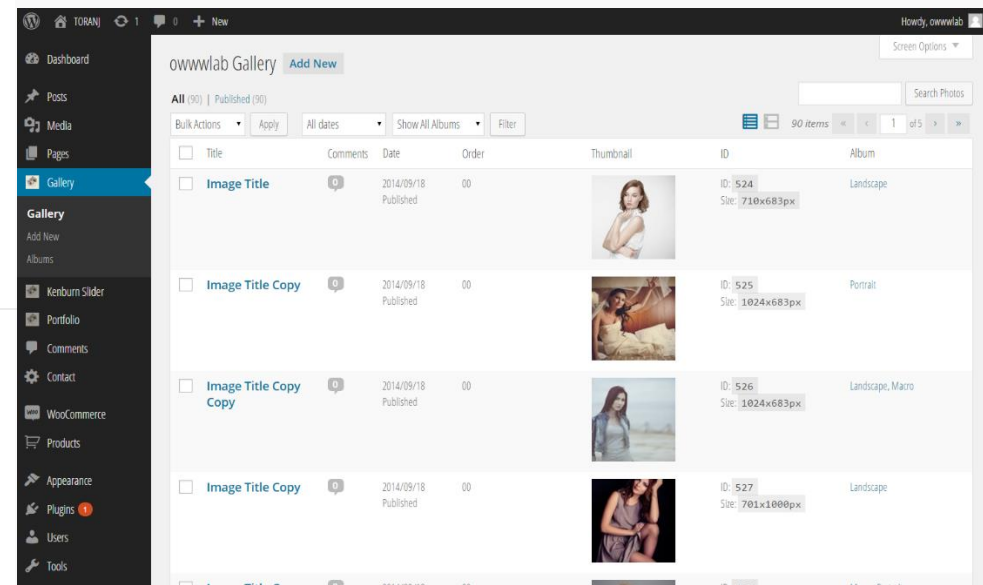

As the name implies, this plugin adds the ability of Galleries to your WordPress, it is a dedicated plugin coded and developed by owwwlab (the developer of current theme!).

Key features:

- Add/edit/remove unlimited photos
- Categorize within albums
- Uses the WordPress media library
- Add short and long description for the photo
- Photo single page with comments

That is only the management features, combined with the TORANJ theme itself, you can display your photos and albums in variety of ways using Visual composer or not.

- List of Albums (Vertical Scrolling layout)
- List of Albums (Horizontal Scrolling layout)
- Album Page (Grid layout)
- Album Page (Horizontal Scrolling layout)
- Album Page (in-page grid layout)
- Album Page (minimal multi-column layout)
- Show Certain photos only in various layouts
- List of all photos in one page
- Light-box gallery
- Single page

5.1. Gallery widget

This plugin provides you with a widget to display your photos in any sidebar or widget area. You just need to go to your widgets page at admin panel and add it to one or many of your widget areas.

LATEST SHOTS

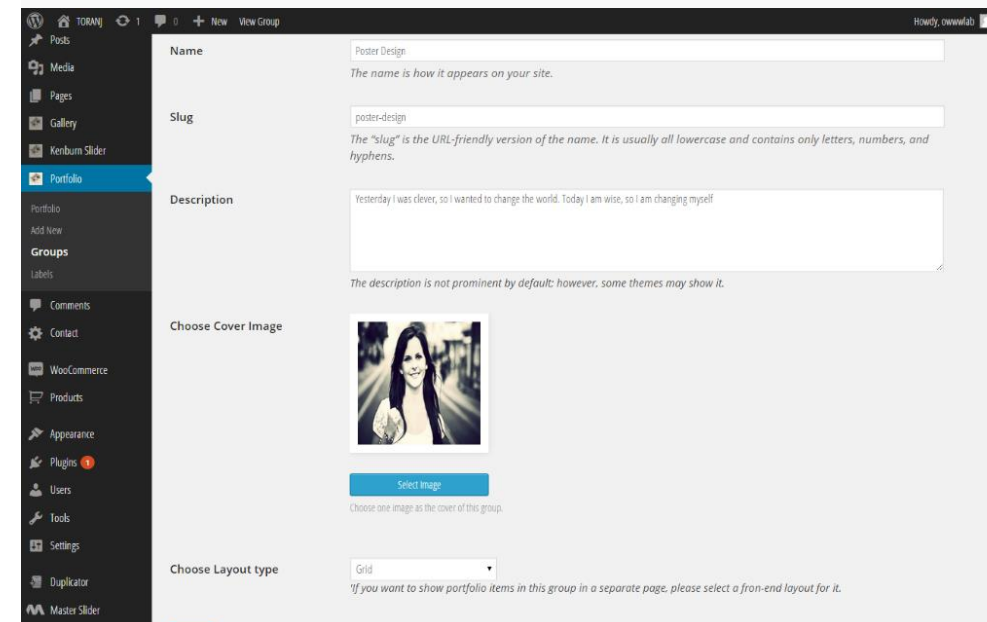

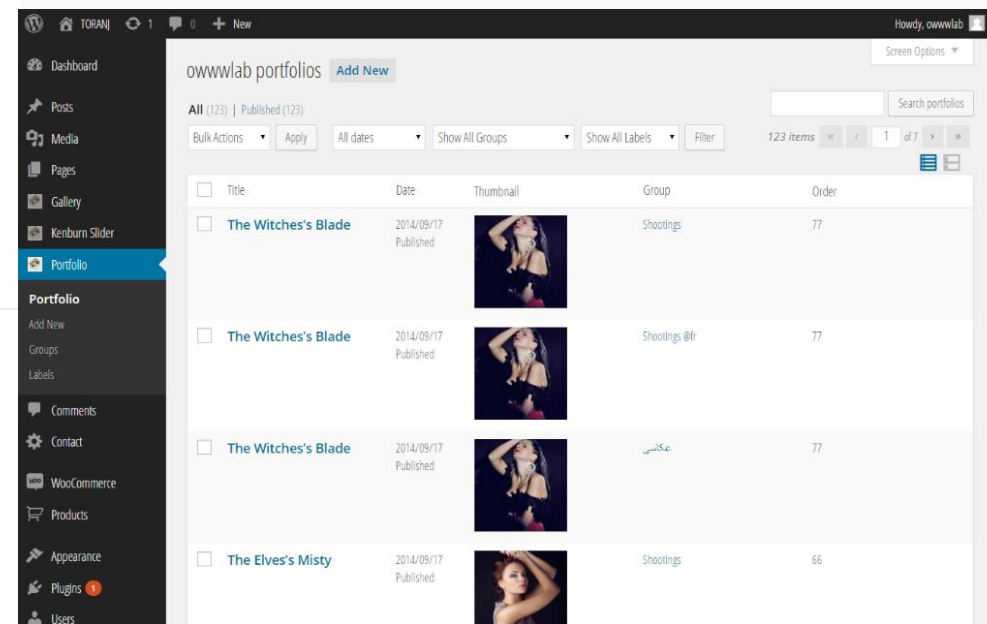

6. Portfolio Plugin

As the name implies, this plugin adds the ability of Portfolio to your WordPress, it is a dedicated plugin coded and developed by owwwlab (the developer of current theme!).

Key features:

- Add/edit/remove unlimited portfolios
- Categorize within groups

This plugin like the gallery plugin can display your content in a variety of ways combined with the theme.

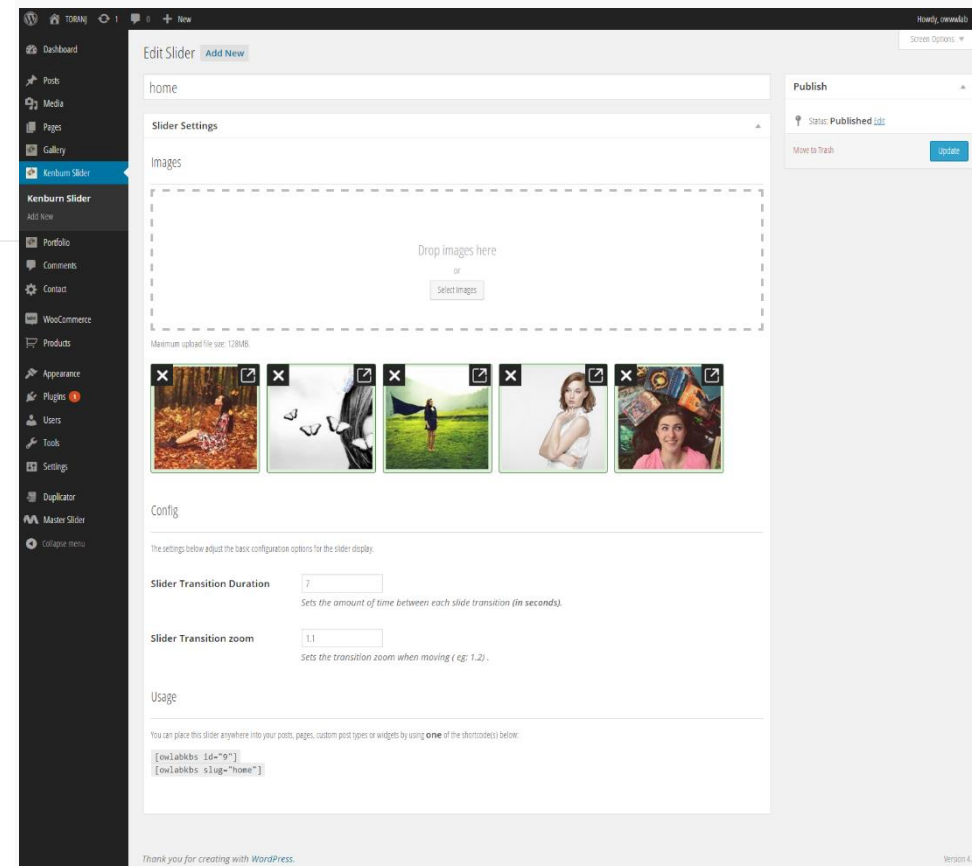

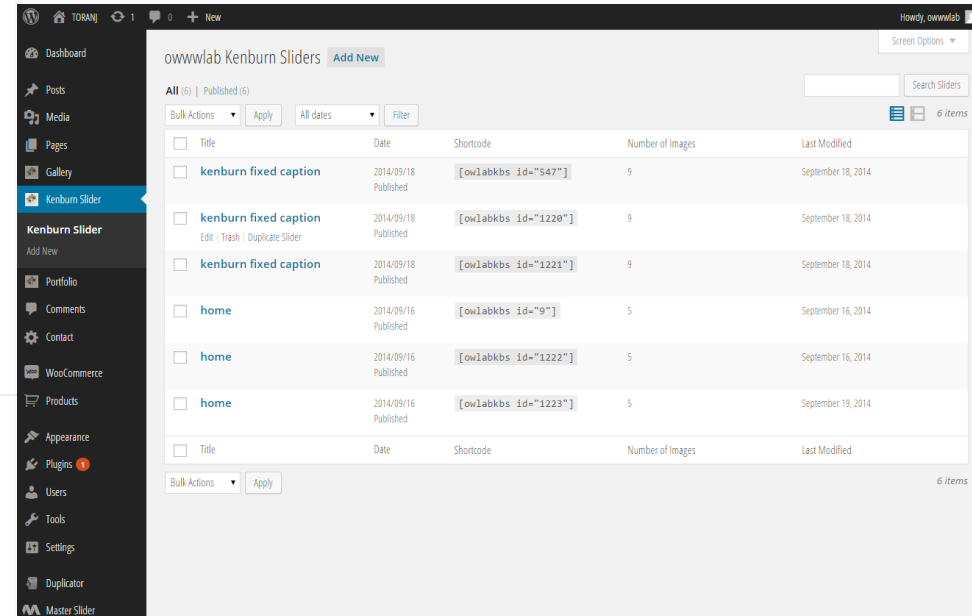

7. KenBurn Plugin

As the name implies, this plugin adds Ken burn slideshow to your WordPress, it is a dedicated plugin coded and developed by owwwlab (the developer of current theme!).

You can add as many sliders as you want and use them at any page, full screen or not.

It uses a special image uploader with drag and drop capability for each slider and then you can add extra metadata for each image like the caption or the position of the caption and title for the image. So you just need to upload some images and add metadata to them. Then you can use any of your sliders with a generated short-code at any of your pages.

Also you can find it at available page elements at Visual composer.

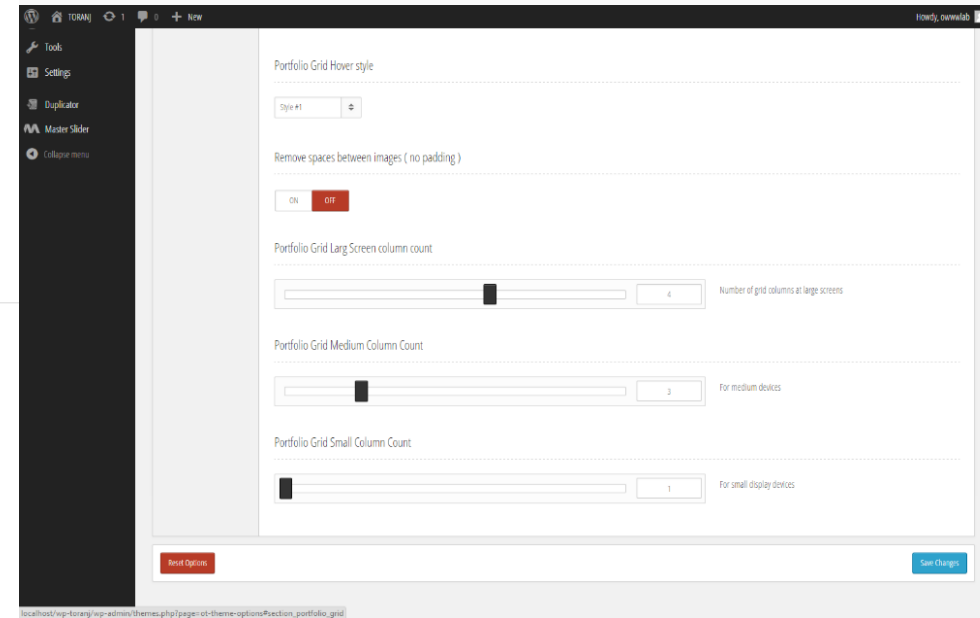

8. Theme Options

Functionality and variations of the theme can be configured using theme option page which can be found under **appearance > theme options**

At theme options page you can moderate:

- Logo
- Copyright text
- Favicon
- Analytics scripts
- Contact details and addresses
- Social icons of your website
- Appearance of your website like sidebar and colors
- Your blog setting and layouts
- Manage what to show at blog pages
- Your portfolio layouts
- Manage extra meta fields for your portfolios
- Manage sidebar of portfolio
- Manage settings for grids
- Manage your gallery pages and settings
- Some settings for woocommerce
- Manage unlimited sidebars to use via visual composer
